

Sprint Goal:

The first priority of Sprint 6 is to resolve the issues running the server and front end encountered during sprint 5, which will be necessary to solve before any more working on expanding/refining functionality can be done. After we are able to run the server and front end correctly, we will implement the AI integration fully, following the algorithm we researched, and ensuring that subcategories and questions are populating as buttons for fixed content question navigation. We will also begin preparing our demo and presentation for the Rhodes symposium.

Team Capacities:

Base Capacity: 16 hrs for full sprint

Harper:

- Base capacity: 16 hours
- Deductions: 2 hour for rental applications
- Final Capacity: 14 hours

JD:

- Base 18 hour
- Deduct 3 hours for big project in other class
- Final Cap: 15 hours

Eddie:

- Base Capacity : 18 hrs
- Deductions: n/a
- Final capacity: 18hrs
